SKINSYNC AI

# AI Transparency & Responsible Use Policy

Last Updated: March 12, 2026

SkinSync AI is committed to responsible, transparent, and ethical use of artificial intelligence technologies. This policy explains how artificial intelligence is used within the SkinSync AI platform and the principles guiding its development and deployment.

This policy applies to https://skinsyncai.com, SkinSync AI mobile applications, and all related services (collectively, the "Platform").

## 1. Purpose of Artificial Intelligence on the Platform

SkinSync AI uses artificial intelligence technologies to support aesthetic consultation and treatment exploration. AI-powered features on the Platform may include:

- facial scan analysis
- skin condition assessments
- treatment suggestion tools
- simulated visual previews of potential aesthetic outcomes
- progress tracking and skin improvement insights

These technologies are designed to assist users and providers in exploring aesthetic treatment possibilities.

AI features are intended to enhance consultation experiences and decision-making but do not replace professional medical judgment.

## 2. AI Is a Support Tool, Not Medical Advice

Artificial intelligence outputs generated by the Platform are **informational tools only**.

AI-generated analysis, suggestions, or visualizations:

- are not medical diagnoses
- are not guaranteed predictions of treatment outcomes
- should not be interpreted as medical advice

Final treatment decisions should always be made in consultation with a **licensed medical professional**.

## 3. Human Oversight

SkinSync AI systems are designed to support medical professionals and users, not replace them.

Healthcare providers remain responsible for:

- evaluating patient eligibility for procedures
- recommending appropriate treatments
- performing medical procedures safely
- monitoring treatment outcomes

AI-generated insights should be considered **supplementary information**.

## 4. Data Privacy and Responsible Data Use

SkinSync AI prioritizes user privacy and data protection.

Our systems are designed with privacy considerations that may include:

- secure processing of user data
- limited access to sensitive information
- data minimization practices
- compliance with applicable privacy regulations

Users maintain control over their data and may request deletion in accordance with our Privacy Policy.

## 5. Fairness and System Evaluation

SkinSync AI is committed to building systems that perform reliably across diverse populations.

We aim to:

- evaluate system performance across diverse skin tones and conditions
- monitor system outputs to identify potential limitations
- continuously improve system reliability and accuracy

Despite these efforts, AI systems may have limitations and should always be interpreted with professional judgment.

## 6. Continuous Improvement of Platform Technology

Technology on the Platform may evolve over time as improvements are made.

SkinSync AI may periodically update platform capabilities to:

- improve system performance
- enhance visualization quality
- refine platform functionality
- improve overall user experience

These improvements are implemented while maintaining strong privacy and security standards.

## 7. Responsible Use of the Platform

Users and providers are expected to use the Platform responsibly.

The Platform should not be used:

- for diagnosing medical conditions
- for emergency medical decisions
- for unauthorized data collection or misuse

Improper use of the Platform may result in restricted access or account suspension.

## 8. Transparency Commitment

SkinSync AI is committed to transparency regarding the use of automated technologies on our platform.

We strive to ensure users understand:

- when automated analysis tools are being used
- what AI-generated outputs represent
- the limitations of automated systems

Transparency helps build trust and supports responsible use of emerging technologies in medical aesthetics.

## 9. Policy Updates

SkinSync AI may update this policy periodically as technology, regulations, and industry standards evolve.

Updated versions will be posted on this page with a revised **Last Updated** date.
